

LICHI HONEY FAQs

1. **What is monofloral honey?**

Mono-floral honey is a honey made mainly from the nectar of one type of flower. For example, litchi honey comes primarily from litchi blossoms, giving it a distinct taste, aroma, and colour linked to that flower source. Dabur offers premium mono-floral variants like Litchi Honey, sourced from aromatic orchards in Bihar, giving each jar a truly distinctive taste experience.

2. **What makes litchi honey special?**

Litchi honey is sourced from the nectar of litchi blossoms, which bloom only once a year in India. It is known for its light colour, delicate floral aroma, and naturally fruity sweetness. Dabur Litchi Honey is sourced from the fragrant litchi orchards of Bihar and crafted in collaboration with JEEViKA - an initiative that also supports the training and empowerment of local women beekeepers.

3. **Why does honey crystallise?**

Crystallisation is a natural phenomenon in pure honey, occurring when glucose gradually forms fine crystals over time. This process does not indicate that the honey is spoiled or adulterated. The honey can be restored to a smooth consistency by gently placing the jar in warm water.

4. **Can honey replace sugar?**

Yes, honey can be used as a natural alternative to sugar in everyday foods and beverages. It is also known to have a lower glycaemic index (GI) than regular sugar, making it a preferred choice for many consumers seeking an alternative sweetener.

5. **Which honey is best for daily use?**

For daily consumption, it is important to choose high-quality honey from a trusted source. The most suitable honey for regular use varies by individual preference, with consumers often selecting variants based on their preferred taste profile, aroma, consistency, and intended usage.

Generic Questions on Honey

6. **What are the different types of honey?**

Honey can be broadly classified into monofloral and multifloral varieties. Common monofloral honey variants include litchi, mustard, eucalyptus, acacia, wild forest, and multifloral honey, each with its own distinct taste, aroma, and colour profile.

7. **What is monofloral honey?**

Monofloral honey is honey made primarily from the nectar of a single type of flower. This gives the honey a more distinctive flavour, aroma, and character that are associated with that specific floral source.

8. **What is the difference between monofloral and multifloral honey?**

Monofloral honey is sourced mainly from one type of flower, whereas multifloral honey is collected from the nectar of multiple flowers. As a result, monofloral honey tends to have a more distinct and consistent taste profile, while multifloral honey has a more blended flavour and aroma.

9. **What makes one honey taste different from another?**

The taste and aroma of honey depend mainly on the flowers from which bees collect nectar. Factors such as region, climate, and season also contribute to the unique character of different honey varieties.

10. **Why does honey vary in colour/texture?**

Honey naturally varies in colour and texture depending on the floral source, geographical origin, and natural composition of sugars and minerals. For instance, some forest-origin honeys, such as Sundarbans honey, may appear darker and have a lighter, more fluid consistency, while varieties like litchi honey are typically lighter in colour and have a smoother, denser texture. These natural variations are a characteristic feature of different honey types.

11. **Why does some honey smell stronger than others?**

Different flowers naturally produce different aroma compounds. As a result, some honey varieties have a milder fragrance, while others may have a richer and stronger aroma.

12. **Is dark honey better than light honey?**

The colour of honey does not determine its quality. Both dark and light honey can be pure and high-quality. The difference mainly lies in the floral source.

13. **Which type of honey is best for daily use?**

For daily consumption, it is important to choose high-quality honey from a trusted source. The most suitable honey for regular use varies by individual preference, with consumers often selecting variants based on their preferred taste profile, aroma, consistency, and intended usage.

Monofloral education

14. **Is monofloral honey made from only one flower?**

Monofloral honey is produced primarily from the nectar of a single type of flower. While bees may occasionally collect small amounts of nectar from other flowers, the dominant floral source determines the honey's characteristic taste, aroma, and colour.

15. **Why is monofloral honey often more premium?**

Monofloral honey is often considered more premium because it is sourced predominantly from a specific floral variety during a limited flowering period. This gives it a more distinctive and consistent sensory profile, including its flavour, aroma, and appearance.

16. **What are some common monofloral honey varieties in India?**

Some commonly known monofloral honey varieties include litchi, acacia, ajwain, eucalyptus, mustard, jamun, etc. Each variety has its own unique taste, aroma, colour, and texture.

17. **What is special about litchi honey?**

Litchi honey is sourced from the nectar of litchi blossoms, which bloom only once a year in India. It is known for its light colour, delicate floral aroma, and naturally fruity sweetness.

18. **How is litchi honey different from regular honey?**

Litchi honey is a monofloral variety sourced mainly from litchi blossoms, giving it a more distinct flavour and aroma profile. Compared to regular multifloral honey, it is generally lighter, milder, and more delicate in taste.

19. **What does litchi honey taste like?**

Litchi honey typically has a mild, smooth, and subtly fruity sweetness with light floral notes, making it easy to pair with beverages, breakfast foods, and desserts.

20. Where does litchi honey come from?

Litchi honey is collected by bees from the nectar of litchi flowers during the litchi flowering season. In India, it is commonly sourced from regions known for litchi cultivation, such as parts of Bihar, Uttar Pradesh, and Uttarakhand.

21. Is litchi honey seasonal?

Yes, litchi honey is seasonal because it is harvested during the specific flowering period of litchi trees, which occurs only for a limited time each year.

22. Which monofloral honey is best for tea or breakfast?

The choice of monofloral honey for tea or breakfast largely depends on individual consumer preferences for taste and aroma. Some consumers may prefer milder varieties, such as litchi or acacia honey, while others may enjoy stronger, more distinctive flavour profiles.

23. Is litchi honey also organic honey?

Litchi honey refers to the floral source from which the honey is collected, while organic honey refers to honey produced and certified as per specific organic farming and processing standards. These are two different classifications, and consumers may choose based on their individual preferences and requirements.

Purity and sourcing

24. How can I tell if honey is pure?

The best way to assess honey purity is to choose trusted brands that follow stringent quality checks and comply with food safety standards. Certifications, batch traceability, and laboratory testing are more reliable than the home tests commonly in circulation.

25. How is honey tested for purity?

Honey purity in India is evaluated through advanced laboratory testing methods, including assessment against all the parameters prescribed under FSSAI standards for honey quality and authenticity. These tests help verify composition, detect adulteration, and ensure compliance with food safety and quality standards.

26. How do brands check for adulteration?

Reputed brands use multiple quality control processes and advanced laboratory testing methods to evaluate honey for purity, authenticity, and compliance with the parameters prescribed under FSSAI standards for honey quality and safety.

27. Where is Dabur Litchi Honey sourced from?

Dabur Litchi Honey is sourced from the fragrant litchi orchards of Bihar and is crafted in collaboration with JEEViKA. This initiative also supports the training and empowerment of local women beekeepers, contributing to sustainable livelihood opportunities in the region.

28. Does the floral source affect purity?

The floral source influences the taste, aroma, colour, and texture of honey, but its purity is determined by the quality and authenticity of the honey itself, irrespective of the flower source.

29. Why does honey become thick in winter?

Honey may become thicker in colder temperatures because low temperatures increase viscosity and encourage natural crystallisation, which reduces the fluidity of honey.

30. Can pure honey still look clear and runny?

Yes, the appearance and consistency of pure honey can naturally vary depending on factors such as floral source, composition, and storage conditions. Some pure honey varieties may appear clearer and more fluid than others.

Health and daily consumption

31. Can honey be used every day?

Yes, honey can be consumed daily as part of a balanced diet and lifestyle. Consumers often incorporate honey into beverages, breakfast foods, and everyday recipes based on their individual preferences.

32. How much honey can I consume daily?

The quantity of honey consumed may vary depending on individual dietary needs, lifestyle, and overall sugar intake. It is generally advisable to consume honey in moderation as part of a balanced diet.

33. What are the benefits of consuming honey regularly?

Honey is a natural food known to contain antioxidants and enzymes. It is traditionally known to support overall wellness and metabolism and is often included as part of balanced lifestyle and weight management routines. Honey is also widely used in everyday home remedies, including for soothing cold and cough symptoms. (Based on published scientific literature)

34. Are there any side effects/allergies to Dabur litchi honey?

Dabur Litchi Honey is generally suitable for regular consumption. However, individuals with known allergies to honey, pollen, or bee-related products should consult a healthcare professional before consumption.

35. When is the best time to consume honey?

Honey can be consumed at any time of day, based on individual preference, occasions and usage, such as with tea, breakfast, desserts, or other foods and beverages.

36. Does Dabur litchi honey contain antioxidants?

Yes, Honey is known to naturally contain antioxidants.

37. Does honey contain natural enzymes?

Yes, honey naturally contains enzymes that originate during the honey-making process carried out by bees.

Generic honey FAQs

38. Is Dabur Litchi Honey safe for children?

Dabur Litchi Honey can be consumed by children above one year of age as part of a balanced diet. It is important to follow general dietary guidance and age-appropriate consumption practices.

39. Can infants consume litchi honey? Honey is not recommended for infants below one year of age, in line with standard paediatric guidance.

40. How should honey be stored?

Honey should be stored in a cool, dry place in a tightly sealed container, away from direct sunlight and moisture.

41. Should honey be refrigerated?

Refrigeration is generally not required for honey. Storing honey at room temperature helps maintain its natural consistency and ease of use.

42. **Can I use a metal spoon with honey?**
Yes, honey can be consumed using a clean metal spoon. Normal contact with metal utensils does not affect honey quality during regular household use.
43. **Why does honey foam or bubble sometimes?**
Foam or small bubbles may occasionally appear due to natural air entrapment, temperature changes, or the natural properties of honey. This does not necessarily indicate spoilage.
44. **Why does one batch of honey taste slightly different from another?**
Since honey is a natural product, slight variations in taste, aroma, colour, and texture may occur across batches due to seasonal and floral differences.
45. **Is local honey better than imported honey?**
The quality of honey depends on sourcing, purity standards, and quality checks rather than whether it is local or imported. Consumers may choose based on taste preferences, trust, and availability.
46. **What recipes can I use Dabur litchi honey in?**
Litchi honey can be used in tea, warm water, breakfast bowls, smoothies, desserts, salad dressings, marinades, and everyday recipes that benefit from mild natural sweetness.
47. **How should I choose the right honey for my needs?**
Consumers can choose honey based on their taste preferences, intended usage, aroma profile, texture, and trust in the brand's sourcing and quality standards.
48. **Which honey should I pick for taste versus wellness?**
Different honey varieties offer different taste experiences, ranging from mild and delicate to rich and robust. Consumers may choose based on their flavour preference and intended usage occasion.
49. **What should I look for on a honey label?**
Consumers should look for trusted brands, ingredient information, quality certifications, batch details, nutritional information, and compliance with applicable food safety standards.
50. **What does Agmark Special Grade mean?**
Agmark Special Grade refers to the highest quality classifications for honey under Agmark standards, indicating compliance with stringent quality parameters.
51. **Does filtering make honey less pure?**
Filtering is commonly done to remove particles such as beeswax, propolis and debris to improve clarity. It does not necessarily affect the purity of honey when carried out under standard quality processes.
52. **Do you need to refrigerate honey?**
The best thing about honey is that it does not spoil, and if stored properly, it can last really long. To retain its wonderful flavour, store honey in an airtight jar or container and keep it in a cool & dry place. But there is no need to refrigerate honey.
53. **Does honey help alleviate a cough?**
As per [Ayurveda](#), honey is a time-tested remedy for sore throat and cough and has gained a fair amount of credibility in the medical community. Moreover, the antimicrobial and antioxidant effect of honey restricts the further formation of the mucus, thereby helping from coughing. You can also have [ginger and honey](#) for better results.

54. **Is honey good for hair?**
Honey is a well-reported source of vitamins & minerals and antibacterial properties, and acts as a humectant (attracts moisture), among others. This is why using [honey for](#)

[hair](#) works wonders. Honey works best for dry and damaged hair as it is an emollient, which seals the moisture in the scalp, thus keeping it conditioned from deep within. Applying honey to hair has been used as one of the [home remedies for dry hair](#) for a long time. It not only strengthens your hair from the root but also stimulates the growth of strong and naturally soft & shiny hair.

55. Is honey good for diabetics?

If you have diabetes, you would be required to follow a strict and controlled diet that would usually include cutting down on sugar and other sweet substances.

Each diabetic reacts differently to different kinds of carbohydrates. Honey is also a carbohydrate-rich food, and a teaspoon contains approximately 17 g of carbs.

Therefore, before adding honey to your daily diet, you should check the total amount of carbs you are allowed to consume in a day and then devise a diet plan accordingly.

Also, knowing what works best and what does not for your body in consultation with a doctor is critical.

56. Is honey good for skin?

Honey is incredibly good for the skin thanks to its antibacterial properties. Applying honey to the skin not only gives you a glowing complexion but also gives you baby-soft skin. Using honey for skin also aids in giving an even tone to the complexion while moisturising and cleansing the skin from deep within. Find out more about using [honey for glowing skin](#) with Dabur.

57. Is honey good for infants?

No, honey is not advised for infants. If you have, for some reason, given honey to your baby, monitor his or her health closely for the next 8 to 36 hours. If he/she shows any signs of constipation, lack of appetite or listlessness, immediately phone your paediatrician.

58. How much honey can I eat every day?

Excessiveness of any food, including honey, is not wise. One excellent way to promote healthier eating is to use honey in our everyday food; for example, replace empty-calorie table sugar with nutritious honey in your routine beverages, spread honey instead of jam on bread, etc. For instance, if all this time you have been taking tea, coffee, or juices with table sugar in your regular meals, you could replace the sugar with honey straight away.

59. Is it true that the thicker the consistency, the better the honey?

No. The lower the natural water content, the thicker the honey. Thickness has nothing to do with the quality.

60. Can you tell the purity of honey from its colour?

No, you can't. The colour of honey ranges from almost watery white to dark, depending on the flower from which the nectar was collected.

61. Is honey collected directly from the beehive purer than filtered or processed honey?

No. Honey extracted straight from beehives contains impurities like beeswax, propolis and dust. To make it safe for consumption, it has to be filtered

62. Is it bad to have honey in summer?

No. In fact, as a rich source of carbohydrates, honey provides energy without building heat. So, like glucose, it's ideal for summer. Consumption in moderation is suggested.

63. Is honey a complete natural food?

Yes, it is. Honey contains essential nutrients, including carbohydrates, minerals, and vitamins.

64. Is it true that honey which crystallises is not pure honey?

No. Granulation is a perfectly natural process of crystallisation of the glucose content in honey. Which is why it should not be refrigerated. In fact, crystallised honey can easily be liquefied by placing the bottle in hot water or out in the sun.

65. Is Dabur Honey a pure honey?

YES! Dabur Honey is 100% pure and unadulterated and clears all mandatory FSSAI parameters for purity. Dabur Honey is analysed for 60+ quality checks which includes-

- a. EA-IRMS and LC-IRMS (both are used to check sugar adulteration)
- b. LC-MS/MS (for detection of antibiotics & SMR- to detect presence of rice syrup adulteration)
- c. ICP-MS (for heavy metals contamination) etc.

66. Why does Honey crystallize?

Honey crystallizes because it is a supersaturated solution. This means it has more than 70% natural sugar content, and natural sugar tends to stabilize as crystals. Crystallization of honey is an absolutely natural phenomenon. It also occurs during a change in season, a sudden drop in temperature, or moisture ingress from multiple uses with wet spoons in bottles of honey. Other small particles or even air bubbles can also play a role in the crystallization process.

[Visit this link for more info.](https://www.daburhoney.com/video.aspx) (link: <https://www.daburhoney.com/video.aspx>)

67. Is crystallized honey safe for consumption?

Yes, crystallized honey is generally safe for consumption. Honey crystallizes because it is a supersaturated solution. This means it has more than 70% natural sugar content, and natural sugar tends to stabilize as crystals.

[Visit this link for more info.](https://www.daburhoney.com/video.aspx) (link: <https://www.daburhoney.com/video.aspx>)

68. Is Dabur honey original honey?

Yes, Dabur Honey is 100% original and pure honey without any adulteration. It clears all mandatory FSSAI parameters for purity. Dabur sources its honey from Indian beekeepers and tests all batches of honey for purity and absence of any adulterants like sugar syrup, antibiotics, metal contaminants, etc.

69. Why does the colour of honey change over time?

It is natural for the colour of honey to change over time due to the presence of high concentrations (more than 70%) of natural sugars like fructose and glucose.

70. Why is some honey darker and others lighter in colour? Which one is better?

The natural colour of honey depends on the Flora or region from which it has been collected. For example, Forest honey is darker because forests have high humidity and temperature. Acacia honey is naturally lighter in colour, which is obtained from colder regions like the Himalayan hills.

71. Why do you write "manufactured by" if you only pack it?

As per the Food Safety and Standards Packaging and Labelling Regulation 2011, it is mandatory to mention the manufacturing location and other mandatory details on the label.

72. How long can I use honey once I open the bottle?

Honey can be used till the full shelf life written on the label, even after opening. However, due care needs to be taken to prevent contamination and spoilage of the product after opening.

73. Why does honey have a long shelf life?

Honey is a shelf-stable supersaturated solution of naturally occurring sugars. High total soluble solids act as a natural preservative, which coupled with low water activity, ensures a longer shelf life.

74. How does honey help in weight management?

As per a clinical study, Dabur Honey helps reduce waist circumference by up to 1 size after 90 days of daily intake (1 tablespoon $\approx$ 20g, in lukewarm water on an empty stomach), along with an active lifestyle. Although individual results may vary.

75. Can we use honey in Hair for nourishing?

Honey is a natural product which is safe to be incorporated into many haircare and skincare regimes. Honey is a popular ingredient in many shampoos and beauty products. However, before any direct usage, it is recommended to consult a haircare expert.

76. Can we use honey for our skin care regimen?

Honey has a natural ability to absorb moisture and is popularly used in skincare products and home remedies. However, before any direct usage, it is advisable to consult a dermatologist.

77. Can we use a wet spoon to scoop honey?

NO, it is not advisable to use a wet spoon to scoop honey, as it would increase the moisture content as well as be a potential source of contamination, leading to deterioration in palatable properties and impacting the shelf life of honey.

78. WHAT IS ORGANIC HONEY?

Dabur's organic honey is thick and delicious, sourced from the hives of Apis Dorsata honeybees nestled in deep forests. No chemicals or pesticides are used within a 5 km vicinity of these hives, thereby ensuring that honeybees collect nectar only from organically grown wild flowers. It is naturally rich in antioxidants to help boost immunity. It is a good source of nutrition and is considered useful for coughs and

colds. It offers multiple health benefits, like improved stamina, better digestion, good heart health & maintaining a healthy lifestyle. Dabur Organic Honey is 100% compliant with all testing parameters mandated by FSSAI for purity guarantee.

79. What is the best time to eat honey?

Honey can be consumed at any time of the day. Not only is it packed with required nutrients for the body, but it also tastes great on its own as well as when paired with other ingredients. There are different types of honey that work in our bodies differently. It is usually recommended to take honey on an empty stomach early in the morning, as it gives an instant kick and energy boost, which is enough to counter an entire day. Also, while going to bed, a spoonful of honey not only gives a good night's sleep but also helps in digestion and relaxation of the mind and body.

80. How is honey made?

The bees, after collecting the nectar from seasonal flowers, transform it by combining it with specific substances of their own, release it in their honeycombs and vigorously and robustly fan their wings to extract excess moisture, which helps in increasing the shelf life of honey. The bees cap the honeycomb cells with wax and seal them. After that the honey collectors remove the combs and extract honey from them.
